

TEL335 Review

Topology

Objectives

- Interconnect the lab equipment to create the specified topology.
- Implement the IP addressing scheme indicated in the topology diagram.
 - Use 200.1.1.[Station #] for the routers' loopback interfaces.
- Ensure that the most secure form of authentication is used between all dynamic routing peers.
- Ensure that Workstations A and B can access the web servers on Workstations C and D.
- Ensure that Workstations C and D can access the SMTP servers on Workstations A and B
- Ensure that only Workstations B and C can Telnet to all of the routers.
- Ensure that the only traffic allowed to LAN A is the traffic required by previous objectives.
- Ensure that the only traffic allowed to LAN B is the traffic required by previous objectives.
- Ensure that the only traffic allowed to LAN C is the traffic required by previous objectives.
- Ensure that the only traffic allowed to LAN D is the traffic required by previous objectives.
